Readymix

offers precise control and optimization in the concrete mixing process, operations & Batch process and more.

CRM

Build strong customer relationships and drive business growth with our powerful CRM capabilities.

Property

delivers comprehensive management solutions, ensuring seamless control and optimization across all facets of property management.

BCor ERP

Implementation Stages

1. Discovery & Planning

This stage involves comprehensive analysis and strategizing to understand organizational needs and outline project goals.

2. Design

Involves creating the blueprint for its architecture, modules, and user interface based on the requirements identified in the planning stage.

3. Development

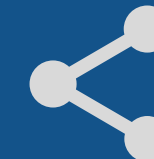

During development, the ERP software is built, customized, and integrated with existing systems, often involving coding, configuration, and database setup.

4. Testing

Rigorous testing is conducted to ensure the ERP system functions as intended, including unit testing, integration testing, and user acceptance testing.

5. Deployment

Deployment involves installing the ERP system into the production environment, migrating data, and training users for a smooth transition.

6. Support & Updates

Continuous support is provided post-deployment, including resolving issues, providing user assistance, and implementing software updates to enhance functionality and address evolving business needs.
